DATA ENGINEER

Data Engineer with a strong background in analytics and automation, now expanding into DataOps practices. My work focuses on building and optimizing ETL pipelines, automating workflows, and ensuring reliable data delivery across environments. With experience spanning analytics, application development, and infrastructure, I bring a holistic view of the data lifecycle and a passion for improving efficiency and scalability through modern data practices.

SKILLS

Python / Django	Kubernetes / Docker	Git & CI/CD
SQL / NoSQL	PySpark	RESTful & Fast API
Apache Airflow	Cloud Platforms & Tools (AWS / GCP)	R & Rshiny
Data Build Tool (DBT)	Terraform	BI Tools

PROFESSIONAL EXPERIENCE

Carsome **July 2025 - Present**
Data Engineer

- Developed and deployed FastAPI services, supporting both self-built and team APIs, published to Kubernetes and managed via ArgoCD manifests.
- Built and maintained Kubernetes-based applications and jobs, enabling services to be exposed as APIs or triggered by Airflow workflows.
- Used Terraform to provision and manage GCP resources, including IAM permissions, buckets, roles, etc
- Ingested data using Datastream to stream raw data from engineering systems prior to cleaning and transformation.
- Developed and maintained Airflow DAGs to run Python workloads on Kubernetes, execute DBT transformations, and perform data scraping tasks.
- Supported infrastructure and platform initiatives, including Tableau Server cloud migration and VM health and configuration checks

GX Bank **Feb 2024 - June 2025**
Data Engineer

- Managed end-to-end data onboarding from multiple sources into Snowflake, implementing the medallion architecture for optimized data organization.
- Transformed raw data into analytics-ready models using DBT, ensuring consistency, documentation, and data quality with tests and lineage tracking.
- Developed Airflow DAGs to orchestrate data pipelines, enhancing automation and workflow management.
- Provided on-call support, resolving data pipeline issues within a 1-hour response window.
- Led insurance data onboarding, reconciling transactional data with source systems to ensure 99.9% accuracy in financial reporting

MoneyMatch Sdn. Bhd. **Dec 2020 - Jan 2024**
Data Associate

In a small team, I handled multiple roles, delivering analytics and reports as a Data Analyst, building and maintaining ETL pipelines and applications as a Data Associate, and developing simple machine learning models, giving me a solid end-to-end understanding of the data lifecycle.

Accomplishments:

- Analyst
  - Produced insights and analytics for the Sales and Compliance Dashboards to track performance and support monitoring.
  - Developed recurring and ad-hoc reports for various departments and management levels to provide performance overviews and highlight issues.

- Engineering
  - Led the development and maintenance of an in-house CRM app.
  - Built various analytics dashboards for internal departments.
  - Structured, maintained, and revamped the Data Pipeline.
  - Implemented CI/CD and version control using Git.
  - Developed an alternative HTML email marketing solution, replacing GetResponse.

- Machine Learning and Automation
  - Generated alternative leads for the Sales Team through web scraping.
  - Recategorized customer industries based on their products.
  - Labeled and categorized customer profiles based on transaction behavior.

UMOBILE **Feb 2020 - July 2020**

Data Science Internship

During my internship at Umobile, I developed a Minimum Viable Product (MVP) for Customer Churn Prediction using H2O and Python. I implemented AutoML technology to automate the modeling process, resulting in accurate churn predictions that contributed to enhancing customer satisfaction and driving business growth.

PROJECTS

FINAL YEAR PROJECT – LEARNING ANALYTICS DASHBOARD [2019]

Developed a web application for students to monitor academic performance and for Student Advisors to identify and support underperforming students.

• Enabled students, advisors, and lecturers to track performance, compare with peers, and receive predictions of final semester outcomes with early warnings.

• Built an interactive dashboard using Django and Bokeh to visualize progress and highlight areas for improvement.

• Applied Logistic Regression to predict student performance based on available data, supporting early intervention.

JOM! APP COLLABORATION WITH VIAMED SDN BHD (2019)

Involved in developing a mobile app using the Ionic framework and Firebase for a trip planner application. Users can create and join events, such as hiking trips.

INNOVATE MALAYSIA-GOOGLE TRACK (2018)

Created an app prototype as a platform for helping the urban farming community. The main goal is to promote urban farming with the help of IoT and the app act as a medium between the users.

MAMPU 24HRS OPEN DATA HACKATHON (2017)

Created a Holiday Trip Advisor web application. Which provides suggestions on accommodations and activities that can be done at the desired place.

EDUCATION

Universiti Putra Malaysia **SEPT 2016 - July 2020**

Bachelor of Software Engineering
